DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A, wherein the apparatus comprises a sealed heat pipe as recited in claims 2-6.

Species B, wherein the apparatus comprises a thermosyphon heat pipe as recited in claims 7-8.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1764

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. During a telephone conversation with William Spatz on June 24, 2003 a provisional election was made with traverse to prosecute the invention of Species A, claims 1-6. Affirmation of this election must be made by applicant in replying to this Office action. Claims 7 and 8 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Specification

3. The disclosure is objected to because of the following informalities: on Page 10, line 12 and line 13 "condensers 60a-d" should be recited as "condensers 160a-d" as illustrated in Figure 2.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1764

5. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsugi et al. (5,667,758).

With respect to claim 1, Matsugi et al. discloses a reactor comprising:
a tank reaction vessel (6) with an interior volume for a reaction mixture (16);
thermally conductive reaction vessel walls (13); and
at least one heat pipe heat transfer device (9) attached to an exterior of the
reaction vessel wall surface.

With respect to claim 2, Matsugi et al. further discloses wherein the heat pipe
heat transfer unit is a sealed heat pipe (see element 9 of fig. 1, 2 and 7-9).

With respect to claims 3 and 5, Matsugi et al. further discloses wherein the
sealed heat pipe is contained within a jacket-type cooler (14).

With respect to claim 4, Matsugi et al. further discloses wherein the heat pipe
heat transfer unit at least substantially circumscribes said tank reaction vessel (col. 5,
lines 14-27).

The examiner notes that the claims are directed toward an apparatus and an
apparatus claim covers what a device is, not what a device does. MPEP 2114. With
respect to claim 6, the reaction vessel being a batch or a continuous reactor is an
operational limitation which does not impart a structural distinction to the invention.
Since no further structural limitations are recited, the claim continues to read on the
apparatus of Matsugi et al.

Claims 1-6 read directly on the apparatus of Matsugi et al.
